

OPEN LETTERS ON THE GAME BOARD

table game with letters (word game) (the manufacturing manual)

There are images of face and back game card surface sides for two card decks on 2, 3, 4, 5 pages, which are to be printed and paste together.

To align face and back game card surface sides it is necessary to carry out following procedure:

1) On face surface side of game card pierce with needle holes at corners of dashed (dotted) line assigned for cutting;

2) Outline surface where back image is to be pasted using above mentioned holes;

3) Cut out along dashed line back image edges trying to align this image with the outlined surface. Then paste back image to this surface. (Use aerosol glue.)

(It is better to use heavyweight paper for face image and lightweight paper for back image.)

It is possible to use duplex printing. For this purpose your printer is to be tuned on using images on pages 2-3 and pages 4-5.

4) Cut card deck images with scissors into separate game cards along dashed lines located on these card complete images.

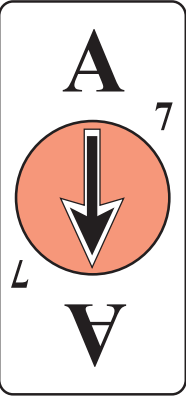

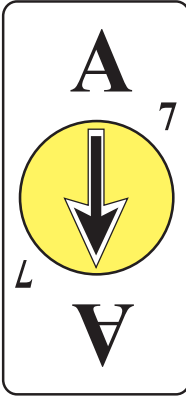

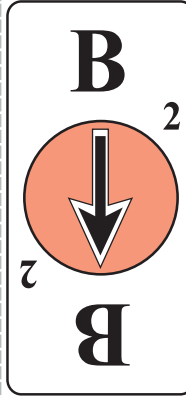

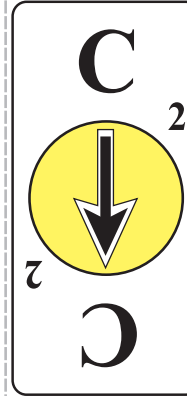

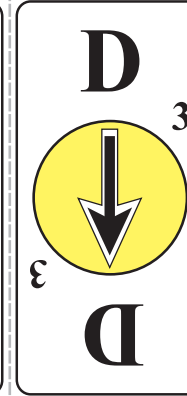

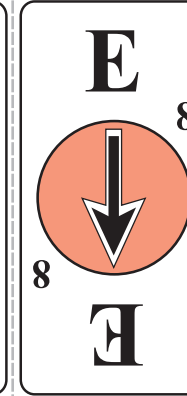

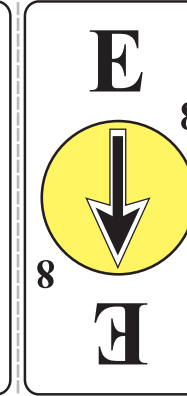

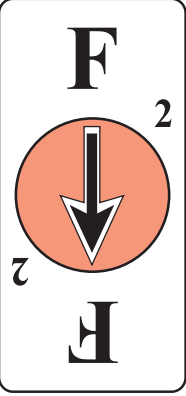

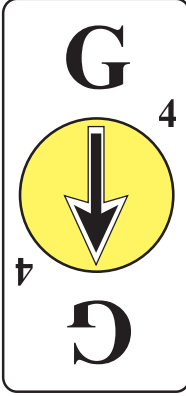

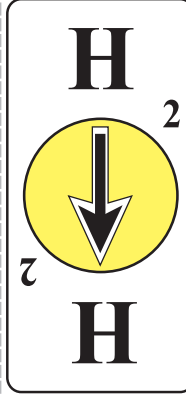

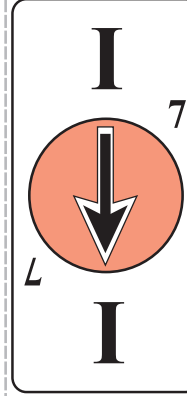

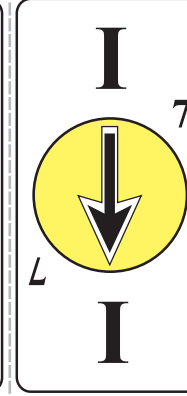

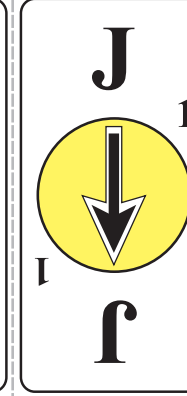

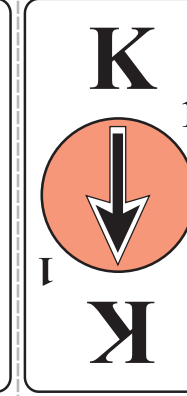

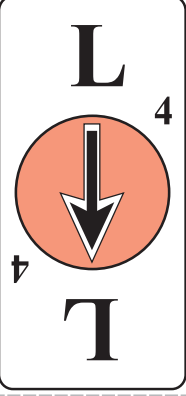

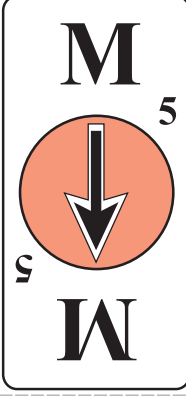

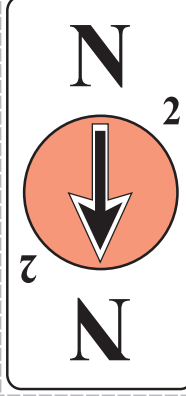

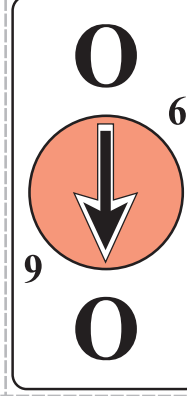

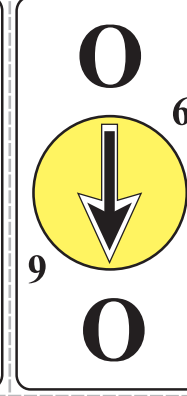

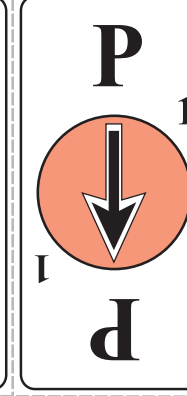

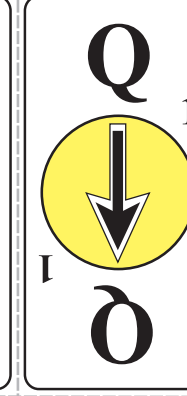

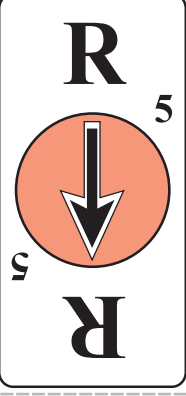

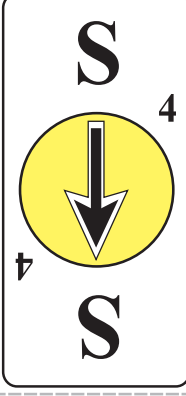

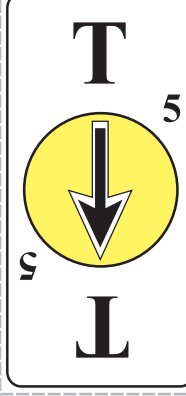

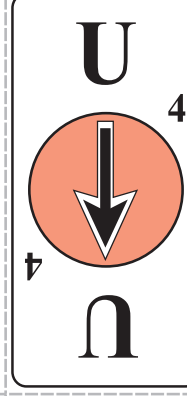

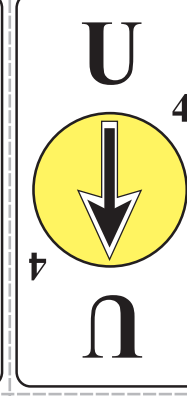

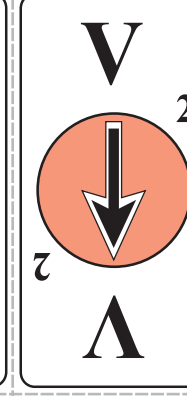

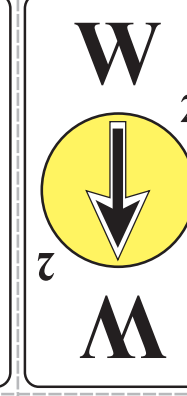

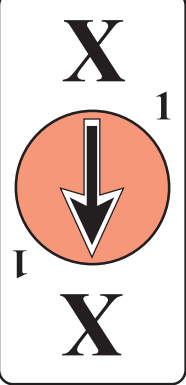

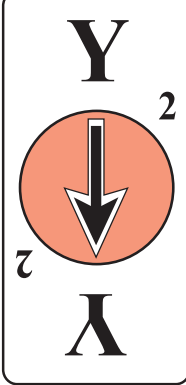

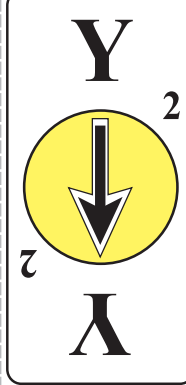

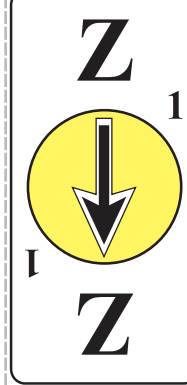

There is the game board image in 6, 7, 8, 9 pages. They are to be printed too. The game board is divided into four images. Excessive edges of each image are to be cut off. Then each image is to be paste onto heavyweight paper properly. These images may be connected with Scotch tape to receive a folded game board.
